Millridge Homeowners Association Maintenance Plan Update Reserve Study Update – Offsite Disclosure Information 2019

We have conducted an onsite reserve study update and maintenance plan update for Millridge Homeowners Association for the year beginning January 1, 2019, in accordance with guidelines established by Community Associations Institute and the American Institute of Certified Public Accountants.

This reserve study and maintenance plan is in compliance with the legislative changes made in 2007 to ORS Chapters 94 and 100.

In addition to providing the reserve study and maintenance plan, we also provide tax and review/audit services to the Association.

Schwindt & Company believes that every association should have a complete building envelope inspection within 12 months of completion of all construction and again every 5 years. This inspection must be performed by a licensed building envelope inspector. Ongoing inspections of the property should be performed by a licensed inspector, with the exception of a roof inspection which may be performed by a licensed roofing contractor.

Increases in Roofing and Painting Costs.

Over the last several years, roofing, painting and other costs have increased at a dramatic pace. Schwindt & Company has noted this in our reserve studies. We were not sure if this was a temporary price increase or the new normal in pricing. We are now of the opinion that these increased prices will most likely continue. Roofing costs have nearly doubled and painting costs have increased 50%. It is still possible to keep the increases to a minimum if Associations can find a vendor that will perform the work at a reduced price, however, these vendors are becoming rare.

The main reason for increased prices aside from normal cost increases appear to be the availability of labor. Many workers left the industry during the downturn and have not reentered the job market thus driving up wage costs to attract qualified workers. Roofers and painters are also seeing increased demand for their services due to aging association property. These factors have created the perfect storm for increased prices.

These increases are being built in to cost estimates and required contributions. Associations will see an increase in the suggested reserve contributions beginning with the 2018/2019 budget years and depending on the year the roofing and painting projects occur, the increases may be substantial.

Associations should have a complete building envelope study conducted every 3-5 years. If the Association chooses not to engage a qualified engineer or architect to perform a building envelope inspection, the Association should be 100% funded using the fully funded method of funding to insure funds are available to pay for unexpected costs.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 4 of 120 Article VII, Section 1 of the Association's Declaration states that all common planting areas are to be maintained by the Association and no changes in landscaping, removal or trimming of trees, lawn or shrubs will be permitted without written authorization by the Association Directors.

Article VII, Section 3 of the Association's Declaration states that exterior painting and roof repair or replacement will be performed by the Association. Townhouse owners are expressly prohibited from painting or changing the exterior of any building, garage, fence, or wall without written permission of the Association Directors.

Article VII, Section 7.1(a) of the Association's Bylaws states that each owner shall be responsible for any maintenance, repair, or replacement of windows and doors, lighting fixtures and lamps that may be in or connected with his Lot.

Assumptions used for inflation, interest, and other factors are detailed on page 20. Income tax factors were not considered due to variables affecting net taxable income and the election of the tax form to be filed.

David T. Schwindt, the representative in charge of this report, is a designated Reserve Study Specialist, Professional Reserve Analyst, and Certified Public Accountant licensed in the states of Oregon, Washington, California, and Arizona.

All information regarding the useful life and cost of reserve components was derived from vendors, the Association's 2008 reserve study completed by Regenesis, and/or from various construction pricing and scheduling manuals.

This reserve study is based on a study done by a different provider. Schwindt and Company takes no responsibility for the accuracy or completeness of the information of the prior study.

The terms *RS Means*, *National Construction Estimator*, and *Fannie Mae Expected Useful Life Tables and Forms* refer to construction industry estimating databases that are used throughout the industry to establish cost estimates and useful life estimates for common building components and products. We suggest that the Association obtain firm bids for these services.

Earthquake insurance deductible is not funded for in the reserve study.

We are not aware of any material issues which, if not disclosed, would cause a material distortion of this report.

Certain information, such as the beginning balance of reserve funds and other information as detailed on the component detail reports, was provided by Association representatives is are deemed to be reliable by us. This reserve study is a reflection of the information provided to us and cannot be used for the purpose of performing an audit, a quality/forensic analysis, or background checks of historical records.

Site visits should not be considered a project audit or quality inspection of the Association's property. This site visit does not evaluate the condition of the property to determine the useful life or needed repairs. Schwindt & Company suggests that the Association perform a building envelope inspection to determine the condition, performance, and the useful life of all the components.

Certain costs outlined in the reserve study are subjective and, as a result, are for planning purposes only. The Association should obtain firm bids at the time of work. Actual costs will depend upon the scope of work as defined at the time the repair, replacement, or restoration is performed. All estimates relating to future work are good faith estimates and projections are based on the estimated inflation rate, which may or may not prove accurate. All future costs and life expectancies should be reviewed and adjusted annually.

This reserve study, unless specifically stated in the report, assumes no fungi, mold, asbestos, lead paint, urea-formaldehyde foam insulation, termite control substances, other chemicals, toxic wastes, radon gas, electro-magnetic radiation or other potentially hazardous materials (on the surface or sub-surface), or termites on the property. The existence of any of these substances may adversely affect the accuracy of this reserve study. Schwindt & Company assumes no responsibility regarding such conditions, as we are not qualified to detect substances, determine the impact, or develop remediation plans/costs.

Since destructive testing was not performed, this reserve study does not attempt to address latent and/or patent defects. Neither does it address useful life expectancies that are abnormally short due either to improper design and/or installation, nor to subsequent improper maintenance. This reserve study assumes all components will be reasonably maintained for the remainder of their life expectancy.

Physical Analysis:

Full onsite reserve studies generally include field measurements and do not include destructive testing. Drawings are usually

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 5 of 120 not available for existing projects.

Onsite updates generally include observations of physical characteristics, but do not include field measurements.

Please note that the Association has not had a complete building envelope inspection. The effects of not having information relating to this inspection are not known.

The client is considered to have deemed previously developed component quantities as accurate and reliable. The current work is reliant on the validity of prior reserve studies.

This reserve study should be reviewed carefully. It may not include all common and limited common element components that will require major maintenance, repair, or replacement in future years, and may not include regular contributions to a reserve account for the cost of such maintenance, repair, or replacement. The failure to include a component in a reserve study, or to provide contributions to a reserve account for a component, may, under some circumstances, require the association to (1) defer major maintenance, repair, or replacement, (2) increase future reserve contributions, (3) borrow funds to pay for major maintenance, repair, or replacement, or (4) impose special assessments for the cost of major maintenance, repair, or replacement.

MILLRIDGE HOMEOWNERS ASSOCIATION

MAINTENANCE PLAN UPDATE

2019

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 7 of 120

Millridge Homeowners Association

Executive Summary of Maintenance Plan

Regular maintenance of common elements is necessary to insure the maximum useful life and optimum performance of components. Of particular concern are items that may present a safety hazard to residents or guests if they are not maintained in a timely manner as well as components that perform a waterproofing function.

This maintenance plan is a cyclical plan that calls for maintenance at regular intervals. The frequency of the maintenance activity and the cost of the activity at the first instance follow a short descriptive narrative. This maintenance plan should be reviewed on an annual basis when preparing the annual operating budget for the Association.

Checklists, developed by Reed Construction Data, Inc., can be photocopied or accessed from the RS Means website:

http://www.rsmeans.com/supplement/67346.asp

They can be used to assess and document the existing condition of an association's common elements and to track the implementation of planned maintenance activities.

Millridge Homeowners Association Maintenance Plan 2019

Pursuant to Oregon State Statutes Chapters 94 and 100, which require a maintenance plan as an integral part of the reserve study, the maintenance procedures are as follows:

The Board of Directors should refer to this maintenance plan each year when preparing the annual operating budget for the Association to ensure that annual maintenance costs are included in the budget for the years that they are scheduled.

Property Inspection

Schwindt & Company recommends that a provision for the annual inspection of common area components be included in the maintenance plan for all associations. This valuable management tool will help to ensure that all components achieve a maximum useful life expectancy and that they function as intended throughout their lifespan.

The inspection should be performed by a qualified professional and should include a written summary of conclusions with specific recommendations for any needed repairs or maintenance.

We suggest that the Association obtain firm bids for this service.

This expense should be included in the annual operating budget for the Association.

Frequency: Annually

Building Envelope Inspection

Schwindt & Company recommends that all associations perform a building envelope inspection within 12 months of substantial completion of all construction or immediately upon detection of any water intrusion or mold problems. This inspection process may involve invasive testing if the problems detected are serious enough to warrant such measures.

The inspection should be performed by an architect, engineer, or state-licensed inspector who is specifically trained in forensic waterproofing analysis. The report should include a written summary of findings with recommendations for needed repairs or maintenance procedures.

All reserve studies and maintenance plans prepared by Schwindt & Company assume that any such recommendations will be followed and that all work will be performed by qualified professionals.

A complete envelope inspection will usually be required only one time although a visual review of the building exterior may be advisable on a periodic basis under certain circumstances. The Association should consult with the inspector(s) who performed the original assessment to determine the best course of action for their individual situation.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 9 of 120

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 10 of 120 This expense should be included in the annual operating budget for the Association for the year in which it is scheduled. We suggest that the Association obtain firm bids for this service.

Frequency: Every 5 years

Roof Inspection

Schwindt & Company recommends that a provision for the periodic inspection and maintenance of roofing and related components be included in the maintenance plan for all associations.

The frequency of this inspection will vary based on the age, condition, complexity, and remaining useful life of the roof system. As the roof components become older, the Association is well advised to consider increasing the frequency of this critical procedure.

The inspection should be performed by a qualified roofing professional and should include a written summary of conclusions with specific recommendations for any needed repairs or maintenance.

Recommended maintenance should be performed promptly by a licensed roofing contractor.

Per the Association, moss removal occurs annually.

We suggest that the Association obtain firm bids for this service.

This expense should be included in the annual operating budget for the Association.

Frequency: Annually

Lighting: Exterior & Common Area Interior – Inspection/Maintenance

Note: Replacement of flickering or burned-out bulbs should be immediate.

Lighting is a crucial element in the provision of safety and security. All lighting systems should be inspected frequently, and care must be taken to identify and correct deficiencies.

Various fixture types may be used according to area needs. Lighting systems should be designed to provide maximum, appropriate illumination at minimal energy expenditures. Lighting maintenance processes should include a general awareness of factors that cause malfunctions in lighting systems, such as dirt accumulation and lumen depreciation. It is important to fully wash, rather than dry-wipe, exterior surfaces to reclaim light and prevent further deterioration.

Deficiencies, required maintenance, and required repairs after completion of review should be noted by the maintenance contractors and/or Association representatives.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 11 of 120 Repairs and inspections should be completed by a qualified professional.

This expense should be included in the annual operating budget for the Association as general property maintenance expense.

Frequency: Bi-Weekly

Clubhouse

The clubhouse may experience heavy traffic that can have a dramatic impact on the life expectancy of the equipment. Preventive maintenance is critical. The overall condition of the floors and mats should be reviewed for deficiencies such as excessive wear, stains, tears, and tripping hazards. The overall condition of the following should be reviewed: walls/ceilings, lighting fixture protection; location of signs and fire safety devices, fire extinguishers, and trash receptacles. Mirrors and glass should be reviewed for cracked/broken surfaces or rough edges.

Deficiencies, required maintenance, and required repairs after completion of review should be noted by the maintenance contractors and/or Association representatives.

This expense should be included in the annual operating budget for the Association as general property maintenance expense.

Frequency: Monthly

Clubhouse-Kitchen-Review

In condo facilities, common area kitchenettes and dining areas may contain pieces of equipment that can jeopardize life safety if preventive maintenance is neglected. The following monthly checklist includes common cooking equipment and dining furniture.

Review the electrical outlet load for fire safety (per manufacturer and code); check that paper/flammable materials are positioned away from heat sources; insure there is an accessible route, and there is sufficient visibility of emergency exits.

Equipment, such as stoves, refrigerators, and sinks should undergo review. *Note: Always follow manufacturer's guidelines.* For each item, check overall condition, switches, timer, piping and valves for leaks, wiring, pilots, doors, gaskets, and belts where applicable. Gas connections should be checked. The flooring systems should be reviewed for deficiencies such as excessive wear, stains, and tripping hazards.

Review the exhaust system for hood function and condition, grease trap function, cleanliness and condition, filter condition, exhaust duct condition, and fan function and condition.

Deficiencies, required maintenance, and required repairs after completion of review should be noted by the maintenance contractors and/or Association representatives.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 12 of 120

Frequency: Monthly

Hot Water Heater – Clubhouse (Common Area Only) – Inspection/Maintenance

Maintenance of the hot water heater includes regularly scheduled inspections and maintenance.

The water heater and related components should be checked for water leaks and fuel supply leaks. The water heater and related components should also be checked for proper operation and settings. Filters should be changed, and all components serviced as required. The surrounding area should be cleaned at the time of servicing.

Deficiencies, required maintenance, and required repairs after completion of review should be noted by the maintenance contractors and/or Association representatives.

Inspections and maintenance should be performed by a qualified, licensed service provider.

We understand that this expense should be included in the annual operating budget for the Association.

Frequency: Monthly to Annually

Property Entrance - Review

The property entrance is a significant reflection on the development as a whole and is often the first stop in the development for residents, prospective residents or buyers, and visitors. The area should be consistently clean, functional, and accessible.

Deficiencies, required maintenance, and required repairs after completion of review should be noted by the maintenance contractors and/or Association representatives.

This expense should be included in the annual operating budget for the Association as general property maintenance expense.

Frequency: Monthly

Swimming Pool & Spa

Swimming pool maintenance should be performed in conjunction with a service contractor. Preventive maintenance in this area consists of validating all equipment is present and functional on a monthly basis. Only certified professionals should complete repairs or maintenance procedures more advanced than manufacturer's prescribed chemical treatments and cleaning. Maintenance staff should accompany the certified professional during statutory inspections and maintenance to ensure that the physical work complies with contract and manufacturer's specifications.

Preventive maintenance includes, but is not limited to, the review of the following: automatic fill device function; electrical component condition; pump/filter/chlorination function; thermostat; and heater function.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 13 of 120 Whirlpools should be reviewed for the function of the timer, drainage, and emergency switch.

Deck surface condition should be reviewed for deficiencies such as rough areas and tripping and slippage hazards. Fence and gates should be reviewed for the function of the anchors, latches and the overall condition. Handrails and ladders should be reviewed for stability, hardware and overall condition. Steps and treads should be reviewed for security and tread condition.

Safety equipment should be reviewed for its condition and function including, but not limited to, the following: the location and condition of the life ring; emergency telephone equipment; compliance of signage with codes and standards; visibility and overall condition of the signage; and fire extinguishers tag currency, placement, housing, hose, and overall condition.

Note: Any and all electrical outlets near water should be serviced by a ground-fault circuitinterrupter (GFI) to protect users from electrical shock.

Water condition and cleanliness should be reviewed and must comply with local health standards. The County Health Department or local water management authority determines health standards in most communities. Standards must be posted within the pool area.

Pool tile/plaster should be reviewed for its overall condition.

During the off-season when the pool is covered, check the security of the fastening system monthly to make sure it hasn't been tampered with.

Deficiencies, required maintenance, and required repairs after completion of review should be noted by the maintenance contractors and/or Association representatives.

This expense should be included in the annual operating budget for the Association.

Frequency: Monthly

Windows & Doors

The performance of and payment for the maintenance and repairs of windows and doors is solely the responsibility of the owners. Owners should be made aware of the consequence of not maintaining their property. A method should be adopted for owners to report problems.

These maintenance procedures should also be performed on the common area buildings including the clubhouse. This expense for the common buildings should be included in the Association's operating budget and may be considered part of the annual property inspection.

Exterior window and door casings, sashes, and frames should be inspected annually for twisting, cracking, deterioration, or other signs of distress. Hardware and weather stripping should be checked for proper operation and fit. Gaskets and seals should be reviewed for signs of moisture intrusion. Weep holes should be cleaned. These building envelope components should be repaired and replaced as necessary.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 14 of 120

Frequency: Monthly

Gutters & Downspouts

Schwindt & Company recommends that all gutters and downspouts be cleaned, visually inspected, and repaired as required every 6 months in the spring and fall.

This important maintenance procedure will help to ensure that the gutters and downspouts are freeflowing at all times, thus preventing the backup of water within the drainage system. Such backup can lead to water ingress issues along the roof edges, around scuppers or other roof penetrations, and at sheet metal flashing or transition points that rely on quick and continuous discharge of water from surrounding roof surfaces to maintain a watertight building exterior.

This expense should be included in the annual operating budget for the Association.

Frequency: Semiannually, more often if necessary

Exterior Walls

The siding, trim, and other wood building components should be inspected for loose, missing, cracked or otherwise damaged components. Sealant joints should be checked for missing or cracked sealant.

Painted surfaces should be checked for paint deterioration, bubbling, or other signs of deterioration.

Dryer vents should be checked **twice a year** and cleared of lint. Also check operation of exhaust baffles to make sure they are present and that they move freely. Exhaust ducts should be cleared of debris **every 3** years.

Any penetrations of the building envelope such as utility lines and light fixtures should be checked annually for signs of water intrusion. Hose bibs should be checked for leaks and other failures. Each hose bib should be shut off and drained during the winter to prevent damage from freezing.

Annual inspections to check for signs of water intrusion should be made of the building envelope interfaces such as where the windows intersect with the walls and where the walls intersect with the roof.

Deficiencies, required maintenance, and required repairs after completion of review should be noted by the maintenance contractors and/or Association representatives.

Inspections should be made by a qualified professional.

This expense should be included in the annual operating budget for the Association.

Frequency: Annually

Fence – Swimming Pool - Inspection

Metal fences require regular inspection of paint condition, rust and other corrosion, and vegetation and

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 15 of 120 trash buildup. The overall condition of the fence should be reviewed for deficiencies such as vegetation encroachment, debris buildup, holes, sagging areas, missing segments, rust, and/or vandalism.

Deficiencies, required maintenance, and required repairs after completion of review should be noted by the maintenance contractors and/or Association representatives.

This expense should be included in the Association's operating budget and may be considered part of the annual property inspection.

Frequency: Annually

Lawn Irrigation System

Periodic maintenance to the lawn irrigation system should be anticipated with this type of component. These maintenance procedures will include replacement of the control mechanism, replacement of damaged piping, upgrading of sprinkler heads and valve components, and any other work that is advised by repair professionals.

In recent years, improvements have been made to this type of system which has increased the efficiency of the water distribution process. Such improvements can be expected to continue to be made and the owners of such systems are well advised to plan on periodic upgrades to maintain the efficiency of their systems.

Lawn irrigation systems also require periodic testing to ensure proper operation. Sometimes this testing is mandated by ordinance or building codes. All work on lawn irrigation systems must be performed by licensed contractors who specialize in this type of work.

This expense should be included in the annual operating budget for the Association.

Frequency: Annually

Exterior Siding Maintenance – Painting

Maintenance of the exterior siding includes regularly scheduled cleaning and inspection of the surface areas for cracks, peeling paint or other sealants, deterioration of the base material, and failure of caulking or other sealant materials that serve a waterproofing function.

This maintenance provision is for the periodic painting of the exterior Hardi-plank and wood siding. The siding should be cleaned, repaired as required, and primed and painted with premium quality exterior house paint in accordance with the siding manufacturer's specifications. The work should be performed by a qualified, licensed painting contractor.

This expense is included in the reserve study for the Association.

Frequency: Every 10 years

<u> Asphalt – Seal Coating</u>

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 16 of 120 Maintenance of asphalt paving includes the periodic application of an asphalt emulsion sealer or "seal coat". This procedure is typically performed every 4 to 7 years, depending on a variety of factors that can affect the useful life of the sealer.

Vehicle traffic is one such factor, and associations that have asphalt paving that carries considerable vehicle traffic should consider a maintenance program that calls for seal coating of asphalt driving surfaces as frequently as every 4 years.

This maintenance procedure involves thoroughly cleaning all pavements, filling of any surface cracks and patching of any locally damaged pavement surfaces. The emulsion sealer is then applied.

Parking area demarcation lines will need to be renewed each time a seal coat is applied. The component expense includes the cost of this work as well as the seal coating cost.

This work should be performed by a licensed paving contractor.

This expense is included in the reserve study for the Association.

Frequency: Every 5 years

<u>Clubhouse - Interior Paint</u>

The interior painted surfaces of the clubhouse should be cleaned, repaired as required, primed and painted with premium quality interior house paint in accordance with the manufacturer's specifications. The work should be performed by a qualified, licensed painting contractor.

This expense is included in the reserve study for the Association.

Frequency: Every 10 years

Brick (or Masonry) Reseal

Maintenance will include cleaning and repairing any damaged surface areas, repair of the mortar joints as required, and the application of a suitable masonry sealer.

It is recommended that the same type of sealer be used on subsequent renewals as this will minimize the chance that incompatible materials will be used.

<u>Brick Siding - Seal</u> Frequency: Every 7 years <u>Brick Entry Sign and Pillars – Seal</u> Frequency: Every 7 years <u>Brick Repointing</u> Repointing brick improves water penetration resistance and will increase the life of the component.

Defective mortar should be removed, the joints cleaned and repointed with the appropriate type mortar, and a suitable sealer applied. It is recommended that the same type of sealer be used on subsequent renewals as this will minimize the chance that incompatible materials will be used.

This work should be performed by a licensed brick mason.

This expense is included in the reserve study for the Association.

<u>Brick Siding - Repoint</u> Frequency: Every 25 years <u>Brick Entry Sign and Pillars – Repoint</u> Frequency: Every 25 years

Concrete Pavement

Maintenance of the concrete pavement should include cleaning the surface areas with pressure washing equipment. The pavement should also be visually reviewed for signs of undue stress and cracking. Noticeable cracks should be filled with a suitable concrete crack filler to prevent penetration of moisture below the concrete surface which will undermine the integrity of the base material over time.

This maintenance plan is designed to preserve and extend the useful life of assets and is dependent upon proper inspection and follow up procedures.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 18 of 120

MILLRIDGE HOMEOWNERS ASSOCIATION RESERVE STUDY LEVEL III: UPDATE WITH NO VISUAL SITE INSPECTION 2019

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 19 of 120

Millridge Homeowners Association

Property Description

Millridge Homeowners Association consists of 16 residential buildings, 1 pool house, and 1 clubhouse with 97 units located in Portland, Oregon. The Association shall provide exterior improvements upon each unit, such as paint, maintenance, repair and replacement of roofs, gutters, downspouts, rain drains, and exterior building surfaces. The individual homeowners are responsible for all maintenance and repairs of their home.

This study uses information supplied by vendors, the Association's 2008 reserve study completed by Regenesis, and various construction pricing and scheduling manuals to determine useful lives and replacement costs.

A site visit was performed by Schwindt and Company in 2012 and 2017. Schwindt & Co did not investigate components for defects, materials, design or workmanship. This would ordinarily be considered in a complete building envelope inspection. Our condition assessment considers if the component is wearing as intended. All components are considered to be in fair condition and appear to be wearing as intended unless noted otherwise in the component detail.

Funds are being accumulated in the replacement fund based on estimates of future need for repairs and replacement of common property components. Actual expenditures, investment income, and provisions for income taxes however, may vary from estimated amounts and the variations may be material. Therefore, amounts accumulated in the replacement fund may not be adequate to meet future funding needs.

If additional funds are needed, the Association has the right, subject to member approval, to increase regular assessments, levy special assessments, or it may delay repairs or replacements until funds are available.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 20 of 120

Millridge Homeowners Association Portland, Oregon Cash Flow Method - Threshold Funding Model Summary (I)

| | | Report Parameters | |
|---|---------------------------------------|----------------------------------|-----------|
| Report Date Account Number | November 19, 2018 2millr | Inflation | 2.50% |
| Budget Year Beginning Budget Year Ending | January 01, 2019 December 31, 2019 | Interest Rate on Reserve Deposit | 0.10% |
| Total Units | 97 | 2019 Beginning Balance | \$199,957 |

Threshold Funding Fully Reserved Model Summary

- This study utilizes the cash flow method and the threshold funding model, which establishes a reserve funding goal that keeps the reserve balance above a specified dollar or percent funded amount. The threshold method assumes that the threshold method is funded with a positive threshold balance, therefore, "fully reserved".
- The following items were not included in the analysis because they have useful lives greater than 30 years: grading/drainage; foundation/footings; storm drains; telephone, cable, and internet lines.
- This funding scenario begins with a contribution of \$170,000.00in 2019 and increases 5% to 2023. In 2024, the contribution is \$130,000 and increases 2.50% for the remaining years of the study. A minimum balance of \$\$41,494 is maintained.
- Associations should have a complete building envelope study conducted every 3-5 years. If the Association chooses not to engage a qualified engineer or architect to perform a building envelope inspection, the Association should be 100% funded using the fully funded method of funding to insure funds are available to pay for unexpected costs.
- The reserve study cash flow model includes an annual increase in the required contribution over the 30-year period. Since the current Board and membership only has the authority to obligate the Association for the current budget year, the cash flow model relies on the actions of future Boards to adhere to the required increase in the annual reserve contribution. Because of the possibility that future Boards, due to budgetary constraints, are not able to increase the reserve contribution to the required amount to provide for adequate funding, the Association may be at risk in the future of special assessing the members to fund needed expenditures.
- The purpose of this study is to insure that adequate replacement funds are available when components reach the end of their useful life. Components will be replaced as required, not necessarily in their expected replacement year. This analysis should be updated annually.

| Scenario 1 Cash Flow Method - Threshold Funding Model II Summ | ary of Calculations |
|---|---------------------|
| Required Month Contribution | \$14,166.67 |
| <i>\$146.05 per unit monthly</i> | |
| Average Net Month Interest Earned | \$3.98 |
| Total Month Allocation to Reserves | \$14,170.65 |
| <i>\$146.09 per unit monthly</i> | |

This provision provides funding to replace the 6-foot metal-post lighting fixtures located throughout the property.

There are 70 light fixtures per the Association.

The cost and useful life assumptions are based on estimates established on RS Means and/or the National Estimator.

The Association will need to obtain bids for this work.

| Remaining Life | 17 | | |

This provision provides funding to seal coat the asphalt on the main roadway. Schwindt & Company estimated 82,166 square feet of asphalt area on the main roadway.

In 2012, the Association provided that the main roadway was overlaid in 2011 by Vancouver Paving for \$37,401.

Per Jim with Vancouver Paving, they repaired one area on the main road, one area on the South alley and one area on the North alley for \$10,200. They also stripped for \$350. The don't seal coat. Seal coat should be done after the repaired.

Schwindt & Co. estimated 39,630 square feet of asphalt. This includes the main road but not the cul de sac area. The cul de sac is funded in a different component. This also include athe asphalt between buildings 16 and 15, buildings 3 and 4, and buildings 6 and 7.

The cost is based on a per square foot estimate provided by Coast Pavement Services, Inc. Jim provided an estimated useful life of 5 years.

| Asphalt Overlay - Area | #1 | 1 Total | @ \$44,571.10 |

| Remaining Life | 2 | | |

Asphalt Overlay - Area #1 continued...

This provision funds for an overlay of the asphalt area at the cul de sac on the main road.

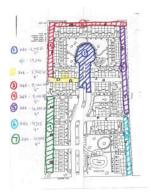

Coast Pavement Services identified this section as area #1. In 2018, they provided a cost of \$43,484 to remove three inches and replace with a two-inch overlay. There are 25,420 square feet of asphalt in this area.

The client's special board of directors meeting minutes on June 24, 2018 requested this component to be reschedule for 2021.

Per the Association, Vancouver Paving repaired and striped the asphalt for \$10,550.

This provision provides funding to replace the composition roof on the clubhouse.

The 2008 reserve study also provided 12 squares of roofing on the clubhouse.

According to the Association, the roof on the clubhouse was replaced in 2009 for \$6,889.70 by Pioneer Roofers.

The useful life assumption is based on estimates established on RS Means and/or the National Estimator.

The Association will need to obtain bids for this work.

| Concrete - Repair | | 1 Total | @\$9,973.36 |
|-------------------|--------------------|---------------------|-------------|
| Asset ID | 1005 | Asset Cost | \$9,973.36 |
| | Non-Capital | Percent Replacement | 100% |
| | Grounds Components | Future Cost | \$10,478.26 |
| Placed in Service | January 2016 | | |
| Useful Life | 5 | | |
| Replacement Year | 2021 | | |
| Remaining Life | 2 | | |

This provision provides funding to repair concrete throughout the community as needed. This includes the pool deck.

In 2012, a bid was obtained from Vancouver Paving Company to repair concrete. The bid provided a cost of \$3,100 to remove a 24' x 4' section of damaged concrete, and a cost of \$5,500 to remove a 24' x 4', 16' x 4', and a 34' x 6' section of damaged concrete areas. This cost is also used for future funding.

The Association's 2008 reserve study completed by Regenesis provided a useful life of 5 years.

The Association will need to obtain bids for future expense.

Per the Association, sidewalks were repaired in 2015 for \$455 and \$7,450 in 2016.

This provision provides funding to partially replace the gutters and downspouts on Building 4. A partial replacement assumes that most of the gutters and downspouts will be in good enough condition and that a full replacement is not needed.

Schwindt & Company estimated 276 linear feet of gutters and downspouts.

The cost is based on a per linear foot estimate provided by Great Northwest Gutters.

Per the Association, the downspouts on the residential buildings were fully replaced in 2016 for \$24,352.30. The gutters were not replaced.

This component is scheduled to occur with the roof replacement.

The Association will need to obtain bids for this work.

| | Non-Capital | Percent Replacement | 100% |
| | Insurance Deductible | Future Cost | \$10,000.00 |
| Placed in Service | January 2017 | | |
| Useful Life | 1 | | |
| Replacement Year | 2019 | | |
| Remaining Life | 0 | | |

This provision funds for the insurance deductible in the event a claim is made.

Many Associations include the insurance deductible in the reserve study as a component. Generally this amount is \$10,000 but can vary based on insurance coverages.

The insurance deductible component is only included as an expenditure in the first year of the study. This expenditure is not listed again during the 30 year cash flow projection. Boards have asked if the inclusion of an insurance deductible in the study as a component can increase the suggested annual reserve contribution. As long as the Association has a threshold amount of greater than \$10,000 in the reserve study as a contingency in the first year of the study, the inclusion of the insurance deductible should not affect the suggested reserve contribution. In other words, if the cash flow projection shows an amount greater than \$10,000 as a contingency balance in the reserve cash flow model without the insurance deductible, the inclusion of the insurance component should not affect the suggested reserve contribution.

This provision provides funding to repair the sidings on Buildings 11 and 12. The siding on the buildings may include wood and/or Hardi-plank.

During Schwindt & Company's 2012 site visit, Buildings 11 and 12 are 1-story.

The Association's 2008 reserve study completed by Regenesis provided a useful life of 7 years and a placed in service date of 2006.

In 2012, Jim Anderson of Cedar Mill Construction provided a cost of \$25,000 to repair the siding on all the buildings during each painting cycle, assuming that the buildings will be painted at the same time. Because the buildings were painted at different times, the cost of \$25,000 is allocated to approximately \$1,562.50 (\$25,000 / 16 buildings) per building for repairs. According to Jim, most of the repairs have been completed on the buildings. If repairs are needed in the future, the expense should be minimal.

The Association will need to obtain bids for this work.

In 2014, the Association repaired Buildings 11, 12 & 7 for \$8,500.

| Remaining Life | 5 | | |

This provision provides funding to replace the pool filter servicing the small swimming pool.

In 2012, Sam Nixon of Clear Waters Services Inc. provided a cost of \$1,250 and a useful life of 20 years for the pool filter.

The Association will need to obtain bids for this work.

| Small Pool: Pool Heater Replace | | 1 Total | @ \$1,478.60 |
|---------------------------------|-----------------|---------------------|--------------|

This provision provides funding to replaster the East swimming pool.

In 2012, Sam Nixon of Clear Waters Services Inc. provided a cost of \$4,000 and a useful life of 10 to 15 years for pool replaster.

The Association will need to obtain bids for this work.

| Small Pool: Chlorine H | Feeders - Replace |) 1 Total | @ \$231.94 |
|------------------------|-------------------|---------------------|------------|
| Asset ID | 1091 | Asset Cost | \$231.94 |
| | Capital | Percent Replacement | 100% |
| | Recreation/Pool | Future Cost | \$275.70 |
| Placed in Service | January 2014 | | |
| Useful Life | 12 | | |
| Replacement Year | 2026 | | |
| Remaining Life | 7 | | |

This provision provides funding to replace the chlorine feeding devices servicing the small swimming pool.

In 2012, Sam Nixon of Clear Waters Services Inc. provided a cost of \$200.

The useful life assumption is based on estimates established on RS Means and/or the National Estimator.

The Association will need to obtain bids for this work.

Millridge Homeowners Association Portland, Oregon Detail Report

| Water Main: Replace | | 5 Buildings | @ \$67,220.11 |
|---------------------|--------------------|---------------------|---------------|
| Asset ID | 1033 | Asset Cost | \$336,100.55 |
| | Capital | Percent Replacement | 100% |
| | Grounds Components | Future Cost | \$858,966.26 |
| Placed in Service | January 2007 | | |
| Useful Life | 50 | | |
| Replacement Year | 2057 | | |
| Remaining Life | 38 | | |

This provision provides funding to replace the main water lines.

The Association's 2008 reserve study completed by Regenesis provided a cost of \$50,000, and a useful life of 50 years to replace the main water lines at 5 buildings. The 2008 reserve study provided that 5 buildings were completed in 2007 by Power Plumbing Company. More buildings will need to be added for funding when locations are known.

The Association will need to obtain bids for this work.

Additional Disclosures

Levels of Service

The following three categories describe the various types of Reserve Studies from exhaustive to minimal.

- I. Full: A Reserve Study in which the following five Reserve Study tasks are performed:
 - Component Inventory
 - Condition Assessment (based upon on-site visual observations)
 - Life and Valuation Estimates
 - Fund Status
 - Funding Plan

II. Update, With Site Visit/On-Site Review: A Reserve Study update in which the following five Reserve Study tasks are performed:

- Component Inventory (verification only, not quantification)
- Condition Assessment (based on on-site visual observations)
- Life and Valuation Estimates
- Fund Status
- Funding Plan
- **III. Update, No Site Visit/Off Site Review:** A Reserve Study update with no on-site visual observations in which the following three Reserve Study tasks are performed:
 - Life and Valuation Estimates
 - Fund Status
 - Funding Plan

Terms and Definitions

CASH FLOW METHOD: A method of developing a reserve *Funding Plan* where contributions to the reserve fund are designed to offset the variable annual expenditures from the reserve fund. Different reserve *Funding Plans* are tested against the anticipated schedule of reserve expenses until the desired *Funding Goal* is achieved.

COMPONENT: The individual line items in the *Reserve Study* developed or updated in the *Physical Analysis*. These elements form the building blocks for the *Reserve Study*. *Components* typically are: 1) association responsibility; 2) with limited *Useful Life* expectancies; 3) predictable *Remaining Useful Life* expectancies; 4) above a minimum threshold cost; and 5) as required by local codes.

COMPONENT INVENTORY: The task of selecting and quantifying reserve *Components*. This task can be accomplished through on-site visual observations, review of association design and organizational documents, a review of established association precedents, and discussion with appropriate association representative(s) of the Association or cooperative.

COMPONENT METHOD: A method of developing a reserve Funding Plan where the total contribution is

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 117 of 120 based on the sum of contributions for individual Components. See Cash Flow Method.

CONDITION ASSESSMENT: The task of evaluating the current condition of the *Component* based on observed or reported characteristics.

CURRENT REPLACEMENT COST: See Replacement Cost.

DEFICIT: An actual or projected *Reserve Balance* that is less than the *Fully Funded Balance*. The opposite would be a *Surplus*.

EFFECTIVE AGE: The difference between *Useful Life* and *Remaining Useful Life*. Not always equivalent to chronological age since some *Components* age irregularly. Used primarily in computations.

FINANCIAL ANALYSIS: The portion of a *Reserve Study* where current status of the reserves (measured as cash or *Percent Funded*) and a recommended reserve contribution rate (reserve *Funding Plan*) are derived, and the projected reserve income and expense over time is presented. The *Financial Analysis* is one of the two parts of a *Reserve Study*.

FULLY FUNDED: 100% Funded. When the actual or projected *Reserve Balance* is equal to the *Fully Funded Balance*.

FULLY FUNDED BALANCE (FFB): Total accrued depreciation, an indicator against which actual or projected *Reserve Balance* can be compared. The *Reserve Balance* that is in direct proportion to the fraction of life "used up" of the current repair or *Replacement Cost*. This number is calculated for each *Component*, then added together for an association total. Two formulas can be utilized, depending on the provider's sensitivity to interest and inflation effects. Note: Both yield identical results when interest and inflation are equivalent.

FFB = Current Cost X Effective Age / Useful Life or FFB = (Current Cost X Effective Age / Useful Life) + [(Current Cost X Effective Age / Useful Life) / (1 + Interest Rate) ^ Remaining Life] - [(Current Cost X Effective Age / Useful Life) / (1 + Inflation Rate) ^ Remaining Life]

FUND STATUS: The status of the reserve fund as compared to an established benchmark such as percent funding. The Association appears not to be adequately funded as the threshold method.

FUNDING GOALS: Independent of methodology utilized, the following represent the basic categories of *Funding Plan* goals:

- Baseline Funding: Establishing a reserve funding goal of keeping the reserve cash balance above zero.
- Full Funding: Setting a reserve funding goal of attaining and maintaining reserves at or near 100% funded.

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 118 of 120 • Statutory Funding: Establishing a reserve funding goal of setting aside the specific minimum amount of reserves required by local statues.

• Threshold Funding: Establishing a reserve funding goal of keeping the *Reserve Balance* above a specified dollar or *Percent Funded* amount. Depending on the threshold, this may be more or less conservative than fully funding.

FUNDING PLAN: An association's plan to provide income to a reserve fund to offset anticipated expenditures from that fund.

FUNDING PRINCIPLES:

- Sufficient Funds When Required
- Stable Contribution Rate over the Years
- Evenly Distributed Contributions over the Years
- Fiscally Responsible

LIFE AND VALUATION ESTIMATES: The task of estimating *Useful Life*, *Remaining Useful Life*, and repair or *Replacement Costs* for the reserve *Components*.

PERCENT FUNDED: The ratio at a particular point of time (typically the beginning of the Fiscal Year) of the actual or projected *Reserve Balance* to the *Fully Funded Balance*, expressed as a percentage.

PHYSICAL ANALYSIS: The portion of the *Reserve Study* where the *Component Inventory*, *Condition Assessment*, and *Life and Valuation Estimate* tasks are performed. This represents one of the two parts of the *Reserve Study*.

REMAINING USEFUL LIFE (RUL): Also referred to as "Remaining Life" (RL). The estimated time, in years, that a reserve *Component* can be expected to continue to serve its intended function. Projects anticipated to occur in the initial year have "zero" *Remaining Useful Life*.

REPLACEMENT COST: The cost of replacing, repairing, or restoring a reserve *Component* to its original functional condition. The *Current Replacement Cost* would be the cost to replace, repair, or restore the *Component* during that particular year.

RESERVE BALANCE: Actual or projected funds as of a particular point in time that the Association has identified for use to defray the future repair or replacement of those major *Components* which the Association is obligated to maintain. Also known as reserves, reserve accounts, or cash reserves. Based upon information provided and not audited.

RESERVE PROVIDER: An individual that prepares Reserve Studies.

RESERVE STUDY: A budget planning tool which identifies the current status of the reserve fund and a stable and equitable *Funding Plan* to offset the anticipated future major common area expenditures. The *Reserve Study*

SCHWINDT & CO. RESERVE STUDY SERVICES PAGE 119 of 120 consists of two parts: the Physical Analysis and the Financial Analysis.

RESPONSIBLE CHARGE: A reserve specialist in *Responsible Charge* of a *Reserve Study* shall render regular and effective supervision to those individuals performing services which directly and materially affect the quality and competence rendered by the reserve specialist. A reserve specialist shall maintain such records as are reasonably necessary to establish that the reserve specialist exercised regular and effective supervision of a *Reserve Study* of which he was in *Responsible Charge*. A reserve specialist engaged in any of the following acts or practices shall be deemed not to have rendered the regular and effective supervision required herein:

• The regular and continuous absence from principal office premises from which professional services are rendered, except for performance of field work or presence in a field office maintained exclusively for a specific project;

The failure to personally inspect or review the work of subordinates where necessary and appropriate;

• The rendering of a limited, cursory, or perfunctory review of plans or projects in lieu of an appropriate detailed review;

• The failure to personally be available on a reasonable basis or with adequate advance notice for consultation and inspection where circumstances require personal availability.

SPECIAL ASSESSMENT: An assessment levied on the members of an association in addition to regular assessments. *Special Assessments* are often regulated by governing documents or local statutes.

SURPLUS: An actual or projected *Reserve Balance* greater than the *Fully Funded Balance*. The opposite would be a *Deficit*.

USEFUL LIFE (UL): Total *Useful Life* or depreciable life. The estimated time, in years, that a *Reserve Component* can be expected to serve its intended function if properly constructed in its present application or installation.
